What's new?

PickPoint has developed a new version of the software that has a faster, more reliable, and easier to maintain platform. Additionally, our support for the original version of the software will eventually come to an end, so update your software and get some new features like:

Color coded tracking to tell if a hanger has not yet been hung, if it is crated, in the oversized area, in the refrigerator, if it contains a controlled medication, or if it is to be filled on arrival.

PickPoint WCS | v3.12.717 | localhost

Load Handout RTS Tools Patients Settings Reports

Load

Rx or Bag number

Go Non-Rx

Patient Information

Name Home Address Cell Gender Birth Date

Bag# 00100042089

Rx Number	Drug Name	Fill Date	Qty	Amt Due
214021002, REF	GLIPIZIDE 10MG TAB	2012-07-31	60	\$4.00
222750000, CTRL	TICLOPIDINE 250MG TAB	2012-07-31	60	\$8.00
218897002, OS	GABAPENTIN 300MG CAP	2012-07-31	90	\$8.00

Ability to use crates to stage/store bags freeing up rail space increasing the effective size of your system!

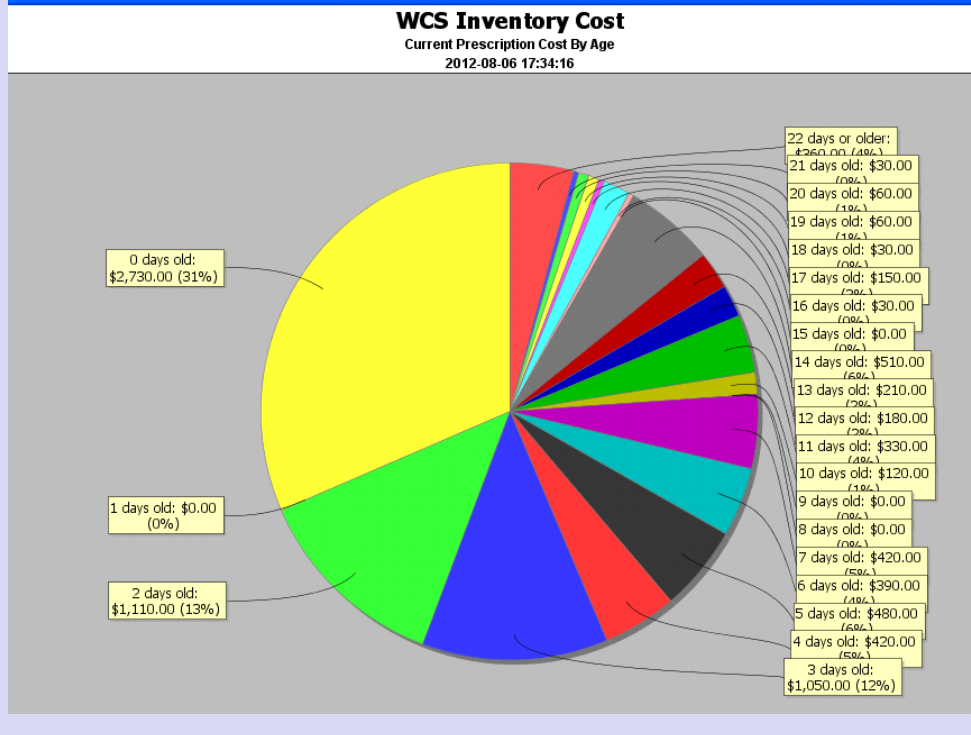

Right click context menus for easy trouble shooting and micro transactions within processes.

Status	Bag Number	Rx Number	Drug Name
Ready	001000042138		
Ready			
Ready			
Ready			
Ready			

- Rx Details
- Verify Rx
- Verify Hanger
- Relight Hanger

Graphic reports to help visualize and manage your system.

Also:

- Ability to integrate with sms systems.
- Central fill capabilities.
- Patient groups
- Compatible with v1 and v2 hardware (although you will want to check out how much faster and more robust v2 hardware is.)

Same easy workflow, new more streamlined interface.

What's Needed to Upgrade

Technical person - ability to install software on workstations.

Pharmacy personnel - somebody to test loading and handout of prescription after the switch over.

Approximate time necessary: 2-3 hours

Time can be shortened by following the notes.

2-3 unloaded prescriptions to be loaded for testing

The Upgrade Process

Please read through the entire process. If there is anything that is not clear or questionable, please contact PickPoint (800)636-1288x1 for technical support.

Setup

 Time can be saved by doing the setup before the scheduled Update.

Ensure PickPoint has GotoAssist Unattended enabled on both main and backup

Setup backup computer with V2 server and client

Load a prescription to test PMS interface

Setup main computer with v2 server and client

update all the workstations with v2

Rename v1 icons on desktop, new client will install new icon (v1 will be deleted upon successful data migration, but let's keep it there for now- just in case)

Double click icon

Click 'OK' on the window notifying that it cannot connect to server

Click on the light grey 'localhost' in the upper left hand corner

Type in the correct IP address

Close client

Re-open client and ensure that it connects

Data Migration

Stop all loading and handouts in the Will Call System.

Identify MAIN and BACKUP computers.

Database backup on MAIN

Run DB updater (sql Script) on MAIN.

Install latest software on MAIN computer

Re-label MAIN and BACKUP

In latest software, set MAIN and BACKUP databases

Start Version Porter (This is the longest part and may take a while)

 If load and handout history does not need to be retained, significant time can be saved.

Test phase

Attempt to light a bag

Try to load a prescription

Open v2 icon on workstation to ensure it is able to connect

Training update

Where is everything?

- primer: load, handout, rts, reports, light bags

Cleanup phase

remove v1 icons from workstations

perform and retrieve database backup
